SUMMARY

Computer Science undergraduate (CGPA 8.90) and 3x hackathon-winning **full-stack** developer with **production** experience shipping **REST APIs** and web modules at a legal-tech startup. Built and deployed 3 **full-stack** applications spanning agri-tech, **computer vision**, and ed-tech, using **Python**, **JavaScript/React**, and **SQL**. Strong foundation in DSA, **OOP**, and **DBMS**; seeking Software Engineering internship/new-grad roles.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, PHP, R, C

Web & Frameworks: React, HTML5, CSS3, Tailwind CSS, Bootstrap, **RESTful APIs**

Databases: MySQL, SQL, Relational Database Design

Data & Analytics: Tableau, **Power BI**, Exploratory Data Analysis, Data Visualization

Tools: Git, GitHub, VS Code, Jupyter Notebook

Core CS: Data Structures & Algorithms, OOP, DBMS, System Design Fundamentals

EXPERIENCE

Software Development Intern — LawVriksh

Sep 2025 – Nov 2025

- Built and shipped **backend** features for legal-tech web modules using **REST APIs**, reducing manual workflow steps for end users and improving turnaround time on core case-management tasks.
- Implemented structured **JSON**-based data contracts between **frontend** and **backend** services, cutting integration bugs reported by the **frontend** team.
- Debugged** and resolved **production** issues across the stack, improving platform reliability and contributing to a smoother release cycle for two feature deployments.

PROJECTS

AgriConnect — Sustainable Agri Supply Chain Platform (Hackathon Winner)

Feb 2025 – Mar 2025

Full-stack web app · Node.js/React · MySQL · REST APIs

- Designed and built a **full-stack** marketplace connecting farmers with industries to trade agricultural waste, with a normalized **relational schema** supporting multi-role transactions.
- Implemented **CRUD** operations, **role-based access** workflows, and location-based matching logic, enabling efficient buyer-seller pairing and supporting a circular-economy waste model.
- Won 1st place among competing teams for technical execution and real-world sustainability impact.

Real-Time Sign Language Translator

Sep 2024 – Dec 2024

Python · TensorFlow/Keras (LSTM) · OpenCV · Computer Vision

- Trained an **LSTM**-based **deep learning** model to recognize American Sign Language (ASL) gestures from live video, converting them to text in real time to aid users with hearing impairments.
- Built an **OpenCV** preprocessing pipeline that achieved 15 FPS **real-time** inference at 90%+ classification accuracy.

ACHIEVEMENTS

- Won 3 hackathons, including AgriConnect — Sustainable Agri Supply Chain Platform.
- Won 1st place in a **Tableau** data visualization contest by Data Development Den, college level.
- Selected for the internal round of Smart India Hackathon (SIH) at college level.
- Competitive exam preparation platform selected for the college's R&D program for further development and incubation.

EDUCATION

B.E., Computer Science & Engineering — Maturi Venkata Subba Rao Engineering College

2023 – Present

CGPA: 8.90 / 10

Intermediate (PCM) — Ideal Junior College

2023

Percentage: 88.0%

SSC — EUHS

2021

CGPA: 10.0 / 10

CERTIFICATIONS

Google Analytics Certification | Discover Data Analysis | Database Programming

CORE COMPETENCIES

Problem Solving · Team Collaboration · Ownership & Accountability · Fast Learning · Communication · Adaptability
